

# Jonathan Alistair Jayes

## Data Scientist

Based in Malmö, Sweden. Relocating to Paris.

✉ jOnathanjayes@gmail.com 🏠 interludeone.com 🐙 github.com/j-jayes 🔗 linkedin.com/in/jonathanjayes

A product-focused Data Scientist with 5 years of experience deploying AI systems into production across labour markets, legal services, and environmental compliance. I am drawn to Mistral because I believe frontier AI is most powerful when it is rigorously measured, continuously improved, and genuinely useful — and I want to work with the team building it. I have used Mistral models in production, designed feature experiments for deployed AI chatbots, and built end-to-end data pipelines that turn complex unstructured data into actionable insight. I thrive at the intersection of product, research, and engineering: equally comfortable writing a SQL query to diagnose an edge case as presenting findings to a non-technical client. I am relocating to Paris and excited to contribute to Mistral's mission of building open, sovereign, and transformative AI.

## Work Experience

---

### Nexer Insight

Malmö, Sweden

Data Scientist

2025 - Present

Deliver production AI systems for clients across legal services, labour markets, and environmental compliance; lead a team of three and mentor junior colleagues.

- Built and deployed an AI legal chatbot serving 800 lawyers across Sweden using Google's Agent Development Kit and a React frontend; used Mistral and other frontier models in production, benchmarking them on cost and quality; implemented feature flags to measure the impact of a suggested follow-up question feature on user engagement — the chatbot is being scaled across the EU.
- Led a data-ingestion sprint for the same chatbot, experimenting with chunking strategies and OCR models to maximise throughput at low cost, improving pipeline quality and reducing ingestion errors.
- Architected and deployed a production RAG system — now live on the website of Sweden's largest labour union — that enables members to query salary statistics from Statistics Sweden (SCB) through a custom web interface, empowering workers with data-driven benchmarks before salary negotiations.
- Developed a green-claim identification system for a major Swedish garden products manufacturer, applying NLP to detect greenwashing across multi-channel advertising campaigns and verify compliance with EU environmental marketing regulations.
- Designed and delivered a Microsoft Copilot Studio workshop series for 40 municipal workers at a south-Swedish utility company, equipping them to build and deploy AI agents in business-critical workflows.
- Managed a delivery team of three data scientists and mentored an intern through applied ML projects, combining technical coaching with agile project management (Jira) to ensure on-time delivery.

### Codera Analytics

Lund, Sweden (Remote)

Full Stack Data Scientist

2022 - 2025

Led data science projects spanning AI automation, African public finance, and large-scale data infrastructure.

- Led development of an AI-powered end-to-end pipeline to automate data extraction from diverse corporate reports, reducing manual processing time by ~80%; tracked extraction success rates via a monitoring dashboard to identify edge cases and drive continuous improvement.
- Managed the complete lifecycle of a large-scale public finance data project for Africa, from successful bid to delivery of a structured dataset covering 2,700+ documents.
- Developed and implemented an SDMX-compliant ingestion pipeline for South African Reserve Bank (SARB) and National Treasury financial statistics, utilising Python for ETL and SQL for data validation, making key verified datasets publicly available.
- Engineered a scalable data pipeline incorporating >60 web scrapers and robust database architecture to collect, process, and store complex public finance documents across Africa.

### Fathom Data

Lund, Sweden

Junior Data Scientist

Summer 2022

Developed a data product analyzing scraped consumer pricing trends.

- Developed an automated reporting pipeline using SQL and R to analyse consumer pricing trends from scraped web data, generating insights that informed commercial strategy and client segmentation.

Supported senior economists on competition cases, trade disputes, and industry assessments.

- Drafted sections and compiled supporting evidence for the economic report on a 2-to-1 ostrich merger, contributing to analyses of market definition and competitive effects.
- Executed detailed analysis of South African poultry imports using 8-digit HS code data in Stata and Excel, identifying key trends in volume and pricing relevant to a trade dispute.
- Mapped and analysed mobile data pricing structures across operators, identifying patterns in market segmentation and bundle differentiation.

## Education

---

### PhD in Economic History

**Lund University***Defended October 2025.**2021 - 2025*

- Designed and implemented a novel AI pipeline automating the extraction and structuring of data from historical biographical dictionaries; built a monitoring dashboard tracking successful document-to-database conversions to identify and resolve extraction failures.
- Applied NLP to biographical data to study skilled labour origins and career trajectories, publishing findings as reproducible, open-source analyses using Quarto.
- Compiled large-scale historical datasets involving digitisation, data cleaning, geocoding, and occupational classification (HISCO, HISCLASS).
- Taught courses on quantitative methods, Stata, and map-making.

### Masters in Economics

**Stellenbosch University***Graduated with distinction.**2020 - 2021*

### Honours in Economics and Bachelors in Social Science

**University of Cape Town***Dean's Merit List. Top mark in my year for four courses.**2015 - 2018*

## Skills

---

#### *Technical Skills*

- Data Analysis: Python (Pandas, Polars, scikit-learn), R (tidyverse), SQL, Stata, Advanced Excel
- Machine Learning & AI: Statistical modelling, experimental design, A/B testing, NLP, RAG, LLM APIs (Mistral, OpenAI, Gemini, Claude), Google Agent Development Kit (ADK)
- Engineering: AWS (Lambda), Google Cloud (Functions, Firebase), Docker, Git, GitHub Actions (CI/CD), React
- Open source: Quarto advocate and blogger – write about reproducible data science workflows and document rendering

#### *Languages*

English (native), Swedish (B2), French (A2 – actively improving ahead of move to Paris).

#### *Interests*

Running, Geoguessr, international trade, and open-source software.
