

Jonathan Alistair Jayes

Data Scientist / Economic Consultant

Based in Lund, Sweden

✉ jonathanjayes@gmail.com 🏠 interludeone.com 🐙 github.com/j-jayes 🔗 linkedin.com/in/jonathanjayes

A curious and analytical full-stack data scientist with a PhD background in applying quantitative methods to complex problems. I am known for developing end-to-end data solutions, from ingestion and machine learning modeling to creating clear, impactful visualizations that drive business decisions. I am looking to apply my robust technical skill set and collaborative mindset within a data science consulting role that fosters continuous growth. Eager to contribute to Accenture's mission of blending technology and human ingenuity to help clients in Malmö make powerful, data-driven decisions.

Work Experience

Codera Analytics

Lund, Sweden

Full Stack Data Scientist

2022 - Present

Led various data science projects, including managing clients and overseeing a team of three

- Led the development and successful testing of an AI-powered end-to-end solution in ML to automate data extraction from diverse corporate reports, reducing manual processing time by ~80%
- Managed the complete lifecycle of a large-scale public finance data project for Africa, from successful bid to delivery of a structured dataset covering 2,700+ documents
- Developed and implemented an SDMX-compliant ingestion pipeline for South African Reserve Bank (SARB) and National Treasury financial statistics, utilising Python for ETL processes and SQL for rigorous data validation, ultimately making key verified datasets publicly available on the Codera Analytics platform.

FTI Consulting South Africa

Cape Town, South Africa

Junior Competition Economics Consultant

03/2019 - 01/2020

Supported senior economists on competition cases, trade disputes, and industry assessments while developing my analytical skills:

- Drafted sections and compiled supporting evidence (incl. data visualizations) for the economic report on a 2-to-1 ostrich merger, contributing to analyses of market definition and competitive effects.
- Executed detailed analysis of South African poultry imports using 8-digit HS code data in Stata/Excel, identifying key trends in volume and pricing relevant to a trade dispute
- Mapped and analyzed complex mobile data pricing structures across operators, identifying patterns in market segmentation and bundle differentiation to support the team's industry assessment

Education

PhD in Economic History

Lund University

Defending my thesis in October 2025.

2021 - 2025

- Designed and implemented a novel AI pipeline automating the extraction and structuring of data from historical biographical dictionaries, reducing manual transcription time by 3 months
- Applied Natural Language Processing (NLP) techniques for analyzing biographical dictionary data to study skilled labor origins and career trajectories.
- Compiled and processed large-scale historical datasets, involving digitization, data cleaning, geocoding, and the use of classification schemes (HISCO, HISCLASS) for occupational data.
- Taught a course on Stata skills and map making

Masters in Economics

Stellenbosch University

Graduated with distinction.

2020 - 2021

Honours in Economics and Bachelors in Social Science

University of Cape Town

Dean's Merit List. Top mark in my year for four courses.

2015 - 2018

Skills

Technical Skills

- Data Analysis and Econometrics: Python (Pandas, Polars, scikit-learn), R (tidyverse, tidymodels), Advanced Excel, SQL, Stata
- Machine Learning & AI: Statistical Analysis, Predictive Modeling, NLP, LLM APIs (OpenAI, Gemini, Claude), scikit-learn
- Cloud & Automation: AWS (Lambda), Google Cloud (Functions), Git, GitHub Actions (CI/CD)
- Currently improving: Docker for containerization, and TypeScript for web development

Languages

English (native), Swedish (B2), French (A2).

Interests

Running, Geoguessr, and international trade.
